

Setting up CLIP on a Network

Make sure when following the directions below you are starting off on the computer you wish to act as the server or main computer.

If Clip is already installed on your computer follow step A if Clip isn't installed on your computer follow step A1.

A. Create a folder and move Clip into it

1. Make a backup of your clip program
2. Open Windows Explorer or My Computer on the machine that Clip is actually installed on (server)
3. On the C: drive create a new folder called Netclip. To do this go to <File> <New> <New folder> and name it Netclip.
4. Find the Clipclas or Clippro or ClipV folder and right click on it once
5. Select Cut
6. Find the new folder you just created called Netclip and double left click on it.
7. Go to edit and select Paste

A1. Creating a folder and installing Clip into it

1. Open Windows Explorer or My Computer on the machine that Clip is actually installed on (server)
2. On the C: drive create a new folder called Netclip. To do this go to <File><New> <New folder> and name it Netclip
3. Install Clip into the Netclip folder. When going through the installation the target location should be C:\Netclip\

B. Share the folder

1. Right click on the Netclip folder and select sharing and security
2. Enable sharing to all users you wish to have access to Clip

You should now be at the workstation and you're at the step where you have to setup a Map a Network Drive.

C. Map a drive from the workstation to the Netclip folder

1. Double left-click on Network Neighborhood or Network Places and find the main computer (the server), and then find the Netclip folder
3. Click on the folder and go to tools and select Map Network Drive.
4. Pick any available letter.
5. Select Browse and then make sure you browse to the Netclip folder. ***Do not select theClipV folder***
5. Select reconnect on login
6. Select Finish

Note if you have Windows XP Network places is going to be located when you click on your start menu.

To see if you mapped the drive right go to My computer and look for the mapped drive you created and double click on it. All you should see is a Clipv folder inside of the drive.

Setting up CLIP on a Network

D. Applying the Client installation files or the Update

Install the Client install from the mapped network drive that has been created you can go to the client folder and double left-click on setup this process will install the client files.

1. Double Click on My Computer
2. Double Click on the Mapped Network Drive.
3. Double Click the Clipv Folder
4. Double Click the Client folder
5. Double Click on setup.exe, this will begin the client install
6. Select Finish, Close all windows and a shortcut should be on your desktop to start Clip
